## EDUCATION

### Bachelor of Technology

Madan Mohan Malaviya Institute of Technology

07/2015 - 05/2019

## WORK EXPERIENCE

### Software Engineer

High Peak Software

05/2021 - Present

High Peak Software builds world-class products for small, medium and enterprise businesses.

#### Achievements/Tasks

- Created Micro Services to handle and process large chunk of data based on continuous requests.
- Designed to offload the existing service by Caching.
- Maintained Micro Services using Messaging Protocol.
- Created APIs, designed Database schema required for the services.

### Member of Technical Staff

Epikindifi Software & Solutions

07/2020 - 05/2021

#### Achievements/Tasks

- Integrated APIs with the local flow.
- Created a NPM module with more than 20 methods to be used internally in the projects.
- Documented the projects based on the features.
- Used technologies like Run-Deck for API scheduling for different features in the projects.

## SKILLS

Node.js

Javascript

Java

React

SQL

PostGres

MySQL

MongoDB

HTML

CSS

RabbitMQ

LoopBack

Express

Git

Redux

## PERSONAL PROJECTS

bCard (02/2020 - 04/2020)

- bCard is a Web Application where a user can create digital cards and share it with clients.
- Designed the model/schema to store all the data in the PostgreSQL database & fetch them using APIs.
- Used Sequelize ORM to update/add all the data in the database.

Blog-App (12/2019 - 02/2020)

- Built the server side of the App using various feature-prone modules based on top of Express.js & Node.js.
- Designed and Integrated MongoDB schema to store & manipulate the collected data of each respective user.
- Built a user-interactive Login/Signup flow for two kinds of users, using the Express-session module.
- Used jQuery and AJAX to update the webpage and make it dynamic.
