PROJECTS

ADVANCE BLIND STICK

This stick is made for the blind person or low vision person.. This stick contains ULTRASONIC SENSOR which sense the nearby objects in front of the user and starts vibrating and beeping..We can vary the detection distance by programming..It also contains switch for on/off , vibrator, beep.It is a user friendly device.It makes life easier for blind people..It is also very helpful for the old age persons.

Created A Spotify Clone Using HTML CSS & JavaScript

In this , we first add the header with the section tag after that the image is inserted with the help of img tag then we started adding the navigation links with anchor tags and further div tags have been implemented for every element in the html code..

Why Spotify:-

Spotify Apps are written in JavaScript, HTML, and CSS; just like a web app. We believe in the future of web standards. These APIs give you access to all of the powerful features in the Spotify desktop client with simple Javascript functions. In a sense, it's like Chromium shipped with 15 million songs.
