PROJECTS

DIAGNOSIS OF CERVICAL CANCER USING CNN MODEL

The project involved collecting and preprocessing medical images, and designing and training a CNN model to accurately classify cervical cancer in patients. I conducted extensive research to determine the optimal CNN architecture, hyperparameters, and data augmentation techniques to improve model performance and generalization. For the CNN model, VGG19 has been used in this project.

FARMERS TRADING PORTAL

This project is about the trading of goods collected from the farmers and deliver it to the consumers directly without any involvement of mediators in between.

STUDENT EXAMINATION MANAGEMENT SYSTEM

This project is where the exams for students are conducted through online.
